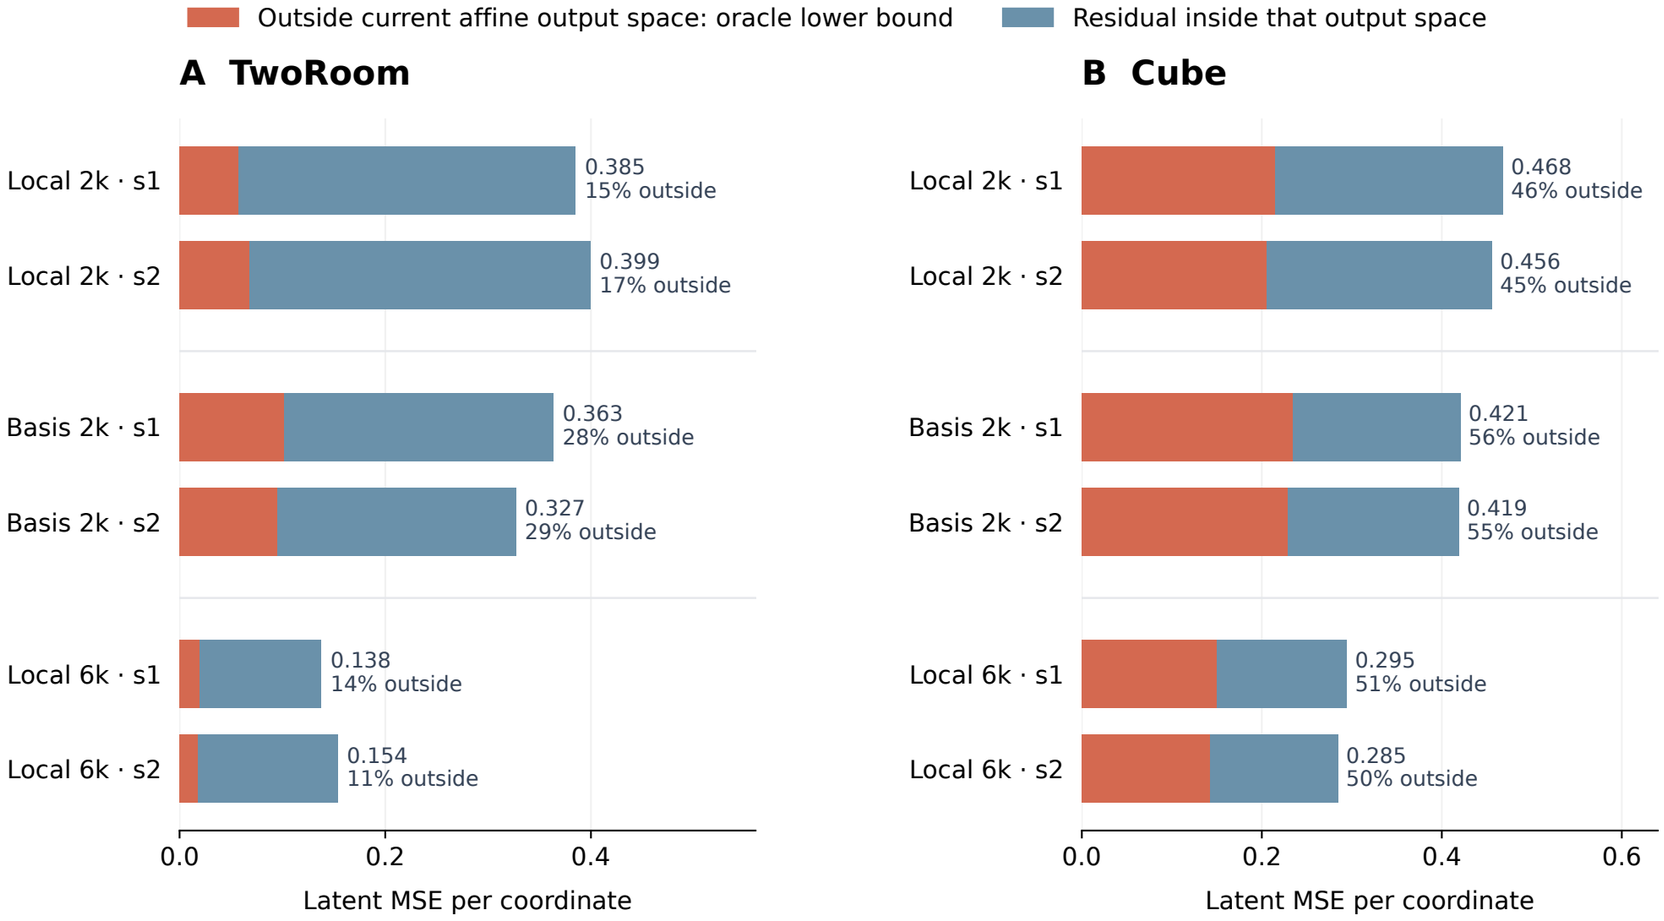
Lower prediction MSE can conceal a larger fixed-output-space error floor

Completed checkpoints · identical or orthogonally rotated 1024D observation codes within each task



C Planning outcomes

	Primary	Fresh
TR local 2k · s1	60%	60%
TR local 2k · s2	56%	56%

TR local 6k · s2	60%	60%
Cube local 2k · s1	24%	16%
Cube local 2k · s2	20%	10%
Cube basis 2k · s1	16%	12%
Cube basis 2k · s2	16%	8%
Cube local 6k · s1	16%	24%
Cube local 6k · s2	22%	20%

50 cases per set; both seeds shown

Basis 2k: lower total MSE, higher outside-space floor in both tasks and both seeds.

Current-weight bound (rank 191/1024); not a causal explanation of planning. Categorical snapshots, not a training-trajectory estimate.

MSE: 64 fixed validation windows, 7 forecast horizons. Planning: original-command controller; primary and fresh are separate case sets.
